

Serial No.: 10/527,606

IN THE SPECIFICATION:

This replacement paragraph is submitted to clarify the specification. Applicant submits that no new matter is injected into the application by way of the substitute paragraphs.

Please replace the paragraph beginning at page 46, line 21, with the following paragraph:

Figure 3 shows a prior art medicament dispenser of a form suitable for use in accord with the present invention, comprising a body **320**, a holder **322**, refill cassette **324** and electronic display **326**. The holder **322** is shaped to fit snugly inside body **320** and is fixed to a point on the body (not shown) about which it rotates. Stops **328**, **330** protrude from the holder **322** and prevent the holder **322** from rotating more than about 180° relative to the body **320**. The stops **328**, **330** also provide two defined positions of the holder **322** within the body **320**. One position is defined by stop **328** meeting with body edge **332** and the other position defined by stop **330** meeting with body edge **334** when the holder has been rotated relative to the body. The area between stops **328** and **330** is shaped to form a thumb or finger grip **336** for the user of the device. The holder **322** forms a shell into which the refill cassette **304** **324** snugly fits.

Please replace the paragraph beginning at page 49, line 11, with the following paragraph:

Serial No.: 10/527,606

In Figure 4f, the blister strip has been further drawn in such that the first three blisters **303**, **305** and **307** are received by the six-pocket index wheel **306**. Indeed, the first blister **303** is open as result off the peeling off of the lid sheet **309** around the beak **310** at the opening station. Figure 4f, thus, may correspond to a first dispensing position, although more often the first blister is not filled with medicament such that Figure 4f would correspond to a primed 'false start' position. Importantly, in the position shown in Figure 4f the leading end of the base sheet **309** and lid sheet **311** are received by the respective base sheet and lid sheet take-up spindles **316**, **318**. The spindle drive action thus, acts on the directly on the base sheet **309** and lid sheet **311** to enable the further driving of the strip **301** through the dispenser **300** for dispensing of medicament from the blisters **305**, **307**.

Please replace the paragraph beginning at page 50, line 4, with the following paragraph:

Figure 6 shows the form of a bobbin **580 680** suitable for attachment to the leading end **652** of a leader strip **650** herein. The bobbin **580 680** may be seen to comprise circumferential slits **682**, **684** for receipt of strip **650** and spindle mounting head **686**, which is shaped for co-operation with, or in other aspects to replace, a spindle (e.g. a lid or base sheet take-up spindle **216**, **218** as shown in Figure 2). The bobbin **580 680** is employed in aspects herein whereby in a pre-step, the leader strip **650** is associated with the bobbin **680** by receipt of its leading end **652** in slit **682** and the bobbin-headed leader strip assembly **650**, **680** is then introduced into a dispenser.

Serial No.: 10/527,606

In these aspects, it will be appreciated that the 'lead' function is performed by the bobbin-headed leader strip assembly **650, 680** rather than just by a leader strip **650** alone.
